

Crypto currency works in a similar way as exchanging GBP to EUR but in his case you do it for cryptocurrency. So essentially you exchange your GBP to bitcoin or any other coin and pay with that.

The instruction on how to set-up the wallet is below:

So, the easiest way to get the wallet where you would keep your bitcoin would be to install Coinomi wallet - it's very privacy-oriented wallet and you can do it for either on

PC: <https://www.coinomi.com/en/downloads/>

or your mobile phone from the Application store.

After you install it - go into app and it will offer you to create the wallet.

There you should choose the coin you would like to pay with and it will be added to your account.

After that, Coinomi has built in service called Cyrpto (Simplex) from which using your credit/debit card you can purchase crypto currency straight to your wallet. Or from this link - but please make sure you have added exact wallet address of the selected crypto currency as in coinomi because if you have purchased it and used wrong address you wont be able to recover it: <https://www.coinomi.com/buy/simplex/>

Alternatively, you could use this 3 minute video which will show you how to set up your wallet properly:

As soon as you get crypto currency to your wallet - we suggest you to go to our web site in the section - How to pay with crypto currency - and there is an instruction on what to do at the checkout page :)

I know it might sound like a lot - but after you do it once, it will be the same all the time
